Front-End 15.0

⬆ **Back to 'Front-End project'**

Project C

Photographer's webpage

For this project, you will create a Photographer's webpage. The main target for this endeavour is to show the portfolio and make an easy and effective contact page for the customer to contact the Photographer.

The webpage should have:

Navbar

You can choose what kind of navbar you want to use.

Landing image

How to use the Hero's image section is up to you. Be impactant though.

Portfolio

That's the main section in the webpage. Try to find the best way to show customers the Photographers work. The pictures attached to the project can be used to this section. Be creative, remember that a Photographer work doesn't necessarily follow only one theme.

Awards(Optional)

Has the Photographer any awards or certificates? Essential to be displayed.

Bio/About

Bio/About page, apart from the portfolio, the bio could help to keep the interest of the customer, empathy is a powerful weapon.

Testimonials

The best way to conquer somebody's trust, the opinion of a third person...

Customers

If the Photographer has ever made any job for en Enterprise, it should be shown too.
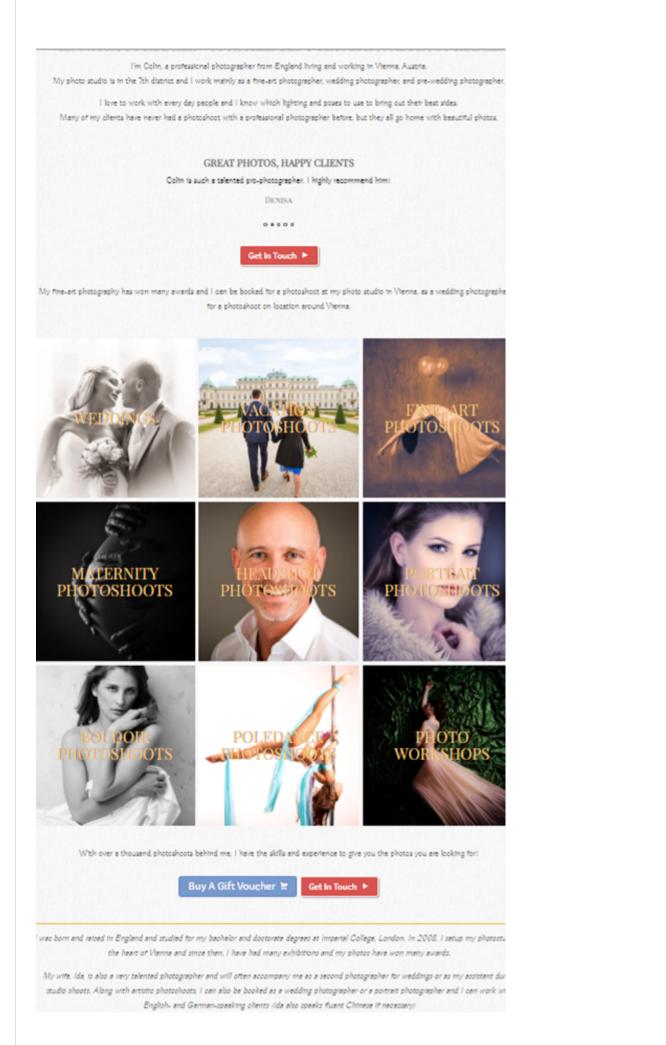

Contact/Register

Create a contact page to connect customers and Photographer.

Media

Very important to have icons to social media. (Please note that the icons wont have any link).

Requirements: Website must be fully responsive (you are allowed to use 100% free theme elements if they are without any copyrighted restrictions and of course you must implement them in combination with your styles - using just prepared theme without your styles is not allowed). You are allowed to divide the page into sections, but it must have at least 3 more independent pages apart from the index page. The example below can be taken as an inspiration but we encourage you to create your own style.

GREAT PHOTOS, HAPPY CLIENTS
